# KNOW YOUR NUMBERS

**DISTANCE:** Total distance the ball traveled.

**CARRY:** The distance the ball traveled in the air before it landed. Your Most Importance Distance Stat!

**BALL SPEED:** The speed the ball traveled. This is created by club speed and impact. The faster the club speed and centeredness of the hit are the two main determining factors that will dictate ball speed.

**BALL DIRECTION:** This is the angle between the target line and ball path at launch. If you see "0" then your ball is traveling directly along the target line at launch.

**LAUNCH ANGLE:** The angle between the ball path and ground at launch. Swing speed and club selection will impact the launch angle as well as the angle of attack. For example, the average driver launch angle on the PGA Tour is 11.2 degrees.

**BACK SPIN:** The rate of backwards spin rotation on the ball immediately after impact. **SIDE SPIN:** The rate of side spin on the ball. Positive side spin will curve right, negative will curve left.

**SWING PATH:** This is the direction the club is heading at impact. positive numbers indicate "in-to-out" for right hand golfers, but negative numbers indicate "in-to-out" for left handers.

**PEAK VERT:** Maximum height the ball reached during its flight.

**PEAK HORIZ:** This measures how far the ball traveled before it reached its maximum height.

**SEP. DIST:** How far from the center line the shot ended up.

**HEAD SPEED:** The rate of your club head speed at impact. More club speed means more potential distance.

**SMASH FACTOR:** The ratio between club speed and ball speed – literally ball speed divided by club speed. Smash factor is an indicator of how efficiently energy is transferred from the club head to the ball. There is an optimal smash factor for each club, ranging from a driver at 1.50 to a pitching wedge at 1.25.
