KNOW YOUR NUMBERS

DISTANCE

Total distance the ball traveled.

CARRY

Distance the ball traveled in the air.

BALL SPEED

Speed of ball at impact.

BALL DIRECTION

Angle between the target line and ball path at launch. If you see "0" then your ball is traveling directly along the target line at launch.

LAUNCH ANGLE

Angle between ball path and ground at launch.

BACK SPIN

Rate of backwards spin on the ball immediately after impact. More lofted clubs generally produce more spin.

SIDE SPIN

Rate of side spin on the ball. Will indicate a potential draw or fade.

IMPACT ANGLE

Direction the club is heading at impact. Positive numbers indicate "in-to-out" for right hand golfers, negative numbers indicate "out-to-in". Opposite for lefty's.

PEAK VERT

Maximum height the ball reached during flight.

PEAK HORIZ

How far the ball traveled before it reached maximum height.

SEP. DIST

How far from the center line the shot ended up (yds)

HEAD SPEED

Club head speed at impact. Higher head speed means more potential distance.

SMASH FACTOR

Ratio between club speed and ball speed. An indicator of how efficiently energy is transferred from club head to ball. Optimal smash factors range from 1.50 for driver to 1.25 for wedges.
