KNOW YOUR NUMBERS

DISTANCE: Total distance the ball traveled.

CARRY: The distance the ball traveled in the air before it landed.

BALL SPEED: The speed the ball traveled. This is created by club speed and impact. The faster the club speed and centeredness of the hit are the two main determining factors that will dictate ball speed.

BALL DIRECTION: This is the angle between the target line and ball path at launch. If you see "0" then your ball is traveling directly along the target line at launch.

LAUNCH ANGLE: The angle between the ball path and ground at launch. Swing speed and club selection will impact the launch angle as well as the angle of attack. For example, the average driver launch angle on the PGA Tour is 11.2 degrees.

BACK SPIN: The rate of backwards spin rotation on the ball immediately after impact. Spin rate is one of the least appreciated numbers in windy conditions. Typically, the more lofted the club, the more spin generated. This is why when playing in the wind we often club up.

SIDE SPIN: The rate of side spin on the ball. The number of degrees will dictate a draw or fade.

IMPACT ANGLE: This is the direction the club is heading at impact. positive numbers indicate "in-to-out" for right hand golfers but negative numbers indicate "in-to-out" for left handers.

PEAK VERT: Maximum height the ball reached during its flight.

PEAK HORIZ: This measures how far the ball traveled before it reached its maximum height.

SEP. DIST: How far from the center line the shot ended up.

HEAD SPEED: The rate of your club head speed at impact. More club speed means more potential distance.

SMASH FACTOR: The ratio between club speed and ball speed – literally ball speed divided by club speed. Smash factor is an indicator of how efficiently energy is transferred from the club head to the ball. There is an optimal smash factor for each club, ranging from a driver at 1.50 to a pitching wedge at 1.25.

SIMULATOR OPERATION

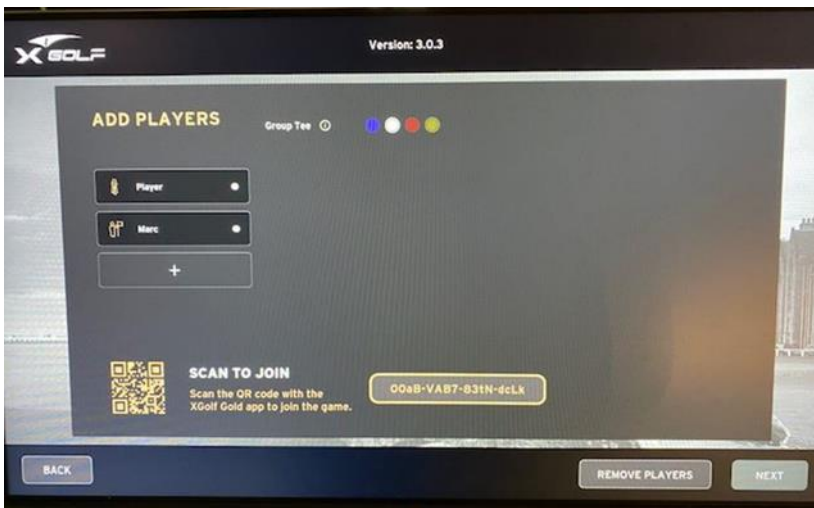

Press the right small round button to take a mulligan.

The triangle buttons raise or lower the tee height.

The rectangle buttons change the viewing perspective for a shot.

Press one of the large round buttons to tee up the next ball.

Use the touchscreen and keyboard to Add players or scan the QR code using the X-Golf app.

The upper left of the playing view shows which player is up, the par and distance of the hole, the current player score relative to par and the shot that player is currently hitting.

The right side of the screen shows the layout of the hole or green (if putting), the distance to the landing spot, the distance of that spot above or below your current lie and the percentage of power of the shot (fairway is 100%, rough is 90%, fairway bunker is 80% and greenside bunker is 50%).

For putting, the moving marbles will show you the slope at different parts of the green. There is also a color palette in the upper right which shows the high and low points. Red indicates the higher points. Just barely touching the screen with your putt will be about 15'... assuming level ground. If on the fringe, it will default to a putter so if you want to chip, you must change the club. The default gimme distance is set to 7' so get it close if you can!
